2 logits
64 logits
$p_1 = 0.9793$, derivative 0.02
$p_1 = 0.9997$, derivative 0.00034
gap 8: the standard deviation of one unscaled score at $d_k = 64$
(of a gap between two scores: $8\sqrt{2} = 11.3$)
$\partial p_1/\partial z_1 = p_1(1 - p_1)$
logit gap $z_1 - z_j$ (all other logits equal)
