2 logits
64 logits
$p_i = 0.9793$, derivative 0.02
$p_i = 0.9997$, derivative 0.00034
gap 8: the standard deviation
of one unscaled score at $d_k = 64$
(the difference of two scores
has $8\sqrt{2} = 11.3$)
$\partial p_i/\partial z_i = p_i(1 - p_i)$
logit gap $z_i - z_j$ (all other logits equal)
